SIRES

The bulls that were bred to be cows

2023 Sire Directory

Another year of growth...Thanks to you!

It's hard to believe another year has passed, but here we are! Once again, we extend a huge thank-you to all our faithful customers. Your support is very meaningful to us.

As Triple-Hil Sires continues to grow, our goal is that we remain committed to the principles that our business was built on, while also being visionary and forward-looking as our industry continues to evolve.

It's with great excitement that we announce our new relationship with Masterpiece Genetics. Moving forward, all Masterpiece bulls will be available exclusively from THS and our distribution network. We share more details about this at the back of the catalog.

You may notice a few small additions. Firstly, most of the living bulls which are owned or leased by THS have been given DMS numbers. We have been receiving requests from dairymen who use the DMS mating tool and wanted to use our bulls in their program. Secondly, we included the Maternal Grand-Sire of all the daughters pictured here, another piece of information that you may find useful when paging through the catalog and making breeding decisions.

This new sire directory unveils quite a list of new young sires, including five Holsteins, two Jerseys and one Ayrshire.

2022 was a big year for some great bulls graduating to our proven lineup as well. Forrest, Cash, and Ice Cloud are three bulls with different qualities and selling points, but all three look to be solidly-transmitting sires that you can count on in a mating.

We reiterate once again, please do not hesitate to call or message us with feedback on THS bulls. Our business model depends heavily on breeders honestly sharing their observations...the good, the bad and the ugly.

As we enter this new year, Triple-Hil Sires will continue to strive to bring you solid, foundational, deep-pedigree dairy genetics.

Best Regards,
The Triple-Hil Team

Proof information

We sometimes receive questions about why our sire directories don't contain the full proof information. In the spirit of full disclosure, we will explain the reason for this.

The full proof information for our proven sires is available on our website and upon request, but we choose to fill our sire directories with photos of real cows in real conditions, with their actual production and classification numbers.

It comes down to the question of what is most important to us and the majority of our customers. While many A.I. studs have decided that photos of their bulls are unnecessary or only worthy of being the size of a postage stamp, we still deem it important that folks can see large, quality photos of the bulls, their family members, and daughters.

At this point, we will continue designing our directories in the way that fits our philosophy.

Collection & Semen Quality

Most of the bulls with the 525 code are housed and collected at our facility in Maryland. The semen is sent to Hawkeye Breeders in Iowa where the packing, freezing and quality control is done.

Any bulls that are collected under CSS or EU qualifications are housed and collected at Hawkeye Breeders.

We are committed to only the highest quality semen. Each straw is packed at 30-40 million sperm count. Any collection that fails the post-thaw test is discarded.

We feel very confident in the semen quality and viability that is coming from Hawkeye Breeders.

Genetic Codes:

A guide to understanding the codes of genetic recessive and dominant gene traits.

Pedigree Analysis & Progeny Description

Forrest entered our proven lineup last year and is growing in his popularity with breeders across the country! This EX-93 Jonah son boasts quite a few talking points, being A2/A2, with a rare aAa code, but also since his bloodlines are free of many household-name sires that tend to crop up in today's pedigrees. You will find no Durham, Goldwyn, Shottle, Storm, Oman, or Planet; he is a true out-cross.

Forrest's dam, who lived to be 11, typified what makes Mt-Glen breeding so special. She was built like a tank, with tremendous width, rib and capacity; this is combined with beautiful dairy character, and a will to make well over 30,000 lbs in a lactation, with up to 6% butterfat!

The first crop of Forrest daughters are a good group of cows, exhibiting lots of width and strength, but also plentiful dairy qualities and a will to milk. We can definitely see resemblances of their paternal Grand-Dam "Fran", with many of the Forrest daughters developing deep, capacious frames. Another positive aspect is Forrest's ability to improve butterfat percentages.

Forrest will add sharp qualities in balance with strength and width.

Pedigree Analysis & Progeny Description

Cash is a Chelios son from a tremendous Pennsylvania-bred cow family. His dam was a deep-bodied, great uddered cow who was sired by a Turn-Pike-View bull, a Stormatic x an EX-94 3E Linjet with over 200,000 lb. lifetime.

Now as a proven sire, Cash is showing his ability to be a consistent transmitter of the qualities he himself possesses. Moderate Stature, good width, huge rib and pure dairyness.

We are very pleased with the pattern observed in his milking daughters. This is a bull who should compliment well many of the high-type bloodlines today. The high, wide rear udders of his sire Chelios are coming through, in addition to the width and substance from his maternal line. As you can observe from the three daughters pictured across the page, Cash is consistently stamping out lots of rib and true dairy quality.

Cash brings a list of positive attributes to the table, with his unique aAa code, A2/A2 Beta Casein, easy calving, great production and superb confirmation.

Pedigree Analysis & Progeny Description

This incredible Black Ice son may be the most impressive bovine specimen we've ever worked with! At 6 years old, Ice Cloud is scored EX-94, with his high breakdown being 97 in front end/capacity. We think he may not have maxed out yet!

Ice Cloud's dam lived to be 15 years old and surpassed 300,000 lb. of lifetime milk production. It's worth noting that as a 2 year old, she scored only GP-80 (++V+G). Some folks would have moved this cow on as being "too average". But if a cow has all the right parts, sometimes they just need time to show their true potential...as Dun-did Cloudy Ria most surely did!

Graduating into our proven lineup this past year, Ice Cloud is siring a distinct breeding pattern, with his daughter excelling in substance of bone, incredible depth of chest and rib, and excellent feet & legs. The majority of daughters are nearly solid black, sometimes including the rear udder and the hooves. You may want to protect Ice Cloud on rear udder height.

When a bull is graduating to proven status, we like to have his aAa numbers reviewed. Take note that Ice Cloud's aAa numbers have been changed to 612543.

Pedigree Analysis & Progeny Description

Whiteout offers genetics packed with loads of longevity. His sire, Comestar Leader, is known worldwide as a bull who makes cows that just keep going long after many of their herd-mates leave the herd. On the bottom side of this pedigree is a line of great cows, many of whom produced well over 200,000 lbs. Whiteout's own dam, the EX-95 4E Linjet Avis lived to be 16 years old and produced just shy of 300,000 lbs of milk!

This bull is definitely siring a consistent pattern. Similar to the Leaders, the milking Whiteout daughters we see are not the type of two year olds that jump out at you. They are wide, deep-bodied, dairy cows with a will to milk. They can tend to be plenty mature in the udder as young cows, but seem to grow into it with age. We've also observed and heard that the Whiteout daughters tend to have very mellow, laid-back temperaments.

Overall, Whiteout is receiving high marks from dairymen, as a bull who can be depended on to bring certain much-needed qualities to the breed.

Pedigree Analysis & Progeny Description

Done Right-Red, a proven, 5-1-6 aAa, red & white, A2/A2, polled bull from Burket-Falls continues to be a fan-favorite here at Triple-Hil Sires.

Done Right combines the D-R-A August family through his sire with the iconic Sophia family at Burket-Falls Farm. The oldest Done Right daughters, which are in the Burket-Falls herd today are a great group of cows. Of the 17 classified daughters there, 11 are VG or EX!

The Done Right daughters could be described as moderate size, balanced cows with great udder texture and really good butterfat production. They also exhibit beautiful feet with good depth of heel and rounded even toes. The oldest Done Right daughters are developing into wonderful mature cows, with confirmation that gets better with age! While udders are quite functional, you will want to protect Done Right on rear udder height.

We think, when all is said and done, Done Right-Red will be a bull who carries the Burket-Falls legacy with ease, siring solid dairy cows, who age well, cause very few issues in your herd, and produce big lifetime records.

Pedigree Analysis & Progeny Description

Rex-PP-Red...a package of profitability. This homozygous polled, red & white, 5-4-6 coded bull from the Rexo family could be described as bull who sires cookie-cutter consistency in his progeny.

He will not likely go down in history as being the sire of big-time show winners; that's not how he's bred. But dairymen in any setup can appreciate cows with snug, shallow udders, super feet & legs, a good sloped rump and central thurl position. Rex does it consistently.

Production-wise, the Rex daughters usually are about average as young cows and generally excel in protein yield. As mature cattle, they are producing quite well, like the beautiful red cow across the page.

One fault we see in the Rex daughters is a lack of rear rib depth, especially in the 2 year olds. Rex-PP-Red is an excellent mating choice for your tall, dairy, angular cows.

Without a doubt, Rex-PP-Red continues to be a bull who receives very positive feedback from dairymen who appreciate his dependable siring pattern.

Pedigree Analysis & Progeny Description

Pep-Red, a Contender-Red son from the world-renown Windy-Knoll-View Pala family, continues to be a solid choice for breeders seeking to improve overall confirmation. We've seen Pep-Red daughters receiving high scores all over the country. They exhibit balance from head to tail, good bone substance and well-attached mammary systems.

As a 5-1-6 aAa coded bull, Pep is a complimentary match to nearly all mainstream bloodlines today that are dominated by 4-3-2 aAa bulls. Pep-Red is proving to be a very effective mating with many of the modern show-type cattle. The young white Pep-Red daughter (top of opposite page) whose dam in an EX-91 Atwood, is a great example of the results which can be achieved with this type of cross.

We recommend protecting Pep-Red on production. If you are looking for a R&W bull who will consistently improve confirmation, Pep is your bull!

Redcloud-Red

Pedigree Analysis & Progeny Description

Dun-Did breeding is pretty rare these days, and Harry Weier seemed to bring it all together when he mated his deep-bodied, dairy, wide-rumped Advent daughter with Deep-Valley Contender-Red.

Redcloud-Red is a bull with a near faultless physique and the ability to transmit the same. His daughters exhibit width that begins with the muzzle and travels to the pins. Not only are their frames ideal; their mammary systems display width, height, good attachments and ideal teat placement.

We recommend using Redcloud on dairy cattle with good production that need a boost in butterfat.

If you need a bull who can consistently bring width, strength and openness to the mating, along with nice udders and good butterfat, Redcloud may be the bull for you.

Lynch

Pedigree Analysis & Progeny Description

Lynch, a bull with exceptional dairy character and unforgettable depth and spring of rib, does very well at transmitting these traits to his daughters. He also sires great udders with high, wide rear attachments. Lynch tends to sire a bit more set to the leg, complimenting a Holstein population that is trending too posty. With his high calving ease, be sure to use Lynch on cows that can handle a large calf.

If you need a bull that will add a lot of dairy and smooth qualities to your tall woody cows, Lynch will deliver results.

Black Onyx *R

Pedigree Analysis & Progeny Description

For the generation of folks who respect Harry Weier's famous Dun-Did breeding, and remember the greatness of Hanover-Hill Triple Threat, Black Onyx is a specialty indeed.

Black Onyx consistently stamps out medium-sized cattle with great spring of rib, style and dairyness. Without a doubt, one of his best transmitting traits may be feet & legs. You must protect Black Onyx on components, but he will add milk! This out-cross "old genetics" bull can crank out some high-scoring cows, young and old alike!

Hold Up

Pedigree Analysis & Progeny Description

As a 1-5-6 Goldchip son, Hold Up is a rare offering indeed. Hold Up's grand-dam, a Durham named Gingerheart, is the cornerstone to most of the cows in the barn. And rightly so; Gingerheart made an incredible lifetime record and produced 13 EX and 10VG daughters, with many more high-scoring descendants beyond that.

The milking Hold Up daughters are generally slower-maturing 2 year olds with beautiful snug udders and short, wide frames. The oldest ones are developing into great dairy cows!

During a recent classification at Welsh-Edge, a Holstein classifier, without knowing their sire, commented "this is the dairy strength our breed needs" when looking at three Hold Up daughters.

At 1.4% SCE, Hold Up is a proven calving ease specialist!

All Things-Red *PP

Pedigree Analysis & Progeny Description

All Things-Red hails from the famed “Sophia Seal” from Burket-Falls Farm. This family line is known for their medium-size frames, and longevity. And of course, the polled gene.

All Things-Red is a great fit for any dairyman looking for a bull that will transmit open, wide dairy traits in medium-frame cattle. Being A2/A2 and homozygous polled makes him a favorite for those dairyman with grass-based and organic dairy market.

The milking All Things daughters are no-nonsense cows, displaying a lot of width, openness and capacity, combined with great production.

Jaguar *B/R

Pedigree Analysis & Progeny Description

“Roxy” is truly a household name in the Holstein industry today. The greatness of the Roxy blood is exemplified by how many branches of this family have flourished and formed legends in their own right. Arguably one of the truest breeding Roxy branches is that of “Lana Rae”. This Rudolph daughter bred and developed by David Tait of Gloryland Holsteins rarely missed when it came to transmitting to the next generation. Lana Rae has 23 EX and 7 VG daughters. Her progeny is scattered across the globe... and there is always a demand for more. Now you can add her influence through this Astro Jet son of her EX-96 Sexation daughter.

The first Jaguar daughters to freshen in generally follow a confirmation pattern that has resemblance from the era of Astro Jet and Sexation. They have moderate-sized frames, functional udders, good feet & legs and can be fairly immature as 2 year olds.

Pedigree Analysis & Progeny Description

Black Eagle is fancy Black Ice son from a EX Durham daughter that we developed in the Triple-Hil herd.

Behind this Durham daughter is the well-known "E" family at Ridgedale that produced the first three generations of EX-95 point cows in history. The Estelle family has produced some great sires including Ridgedale Escalate, a solid-breeding Outside son from Taurus Services.

Black Ice, a Canadian Juror son from a Stardust, has repeatedly impressed us when we travel the country with beautiful mature daughters that are still living in herds today.

The first crop of Black Eagle daughters freshened in this past year. As you can see from the photos below, he's made some really good ones. We do recommend you protect him on udders, especially fore-udder length.

Lion King *B/R

Sexed

Triple-Hil
PHOTOGRAPHY
© 2017 Mountain Photo Studios

Pedigree Analysis & Progeny Description

Lion King is such a balanced bull, exhibiting the decades of balanced breeding on both the top and bottom side of the pedigree. Here's an A2/A2 Jonah son from the famous Broker Lucy line at Mt-Glen Farms!

His dam is an EX-92 cow who is a maternal sister to Dundee Lovely, the great cow behind Lynch and Lincoln. Lynette is sired by a Mt-Glen bull who was a Damion son from an EX-94 Eland daughter. Lynette produced extreme components, especially protein, with a lifetime-to-date average of 3.4%. She is a proven transmitter also with an EX-92 daughter by Dundee.

The milking Lion King daughters, as a group, exhibit moderate stature, wide front ends, and dairy quality. The Lion Kings seem to be great milkers as young cows. It's easy to see many similarities to the Jonah daughters in how they are put together.

Bush Wacker

Sexed

Pedigree Analysis & Progeny Description

This A2/A2 Linjet son hails from the same cow family as Black Onyx. His dam, was in fact, a full sister to Black Onyx's dam. Dun-Did Titan Aggie, although never pictured, was Harry Weir's favorite of the three EX-93 Titan daughters from Dun-Did Senator Aleasha (EX-94).

Bush Wacker has developed into an impressive bull, displaying an amazing amount of width in the front end, good rib, wide rump, and near perfect set of feet & legs.

The first daughters to calve in the herd where he was used naturally are doing well for their owner. Eight are currently classified and average a solid 82 points.

Bush Wacker will deliver plenty of width, strength and openness to a mating.

Hydro

Sexed

Pedigree Analysis

Black, silky, and upstanding are words that describe this handsome Allen son from Welsh-Edge Holsteins.

Hailing from the same family that produced Hold Up, the dam of Hydro is an EX-93 Shot AI daughter that just keeps plugging away. She's currently at 230,000 lbs of milk and still going!

The Gingerheart family rarely misses, and Hydro's dam, Hysterical is proving out to be quite a brood cow herself. She has 9 classified daughters that are all currently GP or better. Three are EX with the highest being 93 points.

On the paternal side, Canyon-Breeze Allen was a 5-4-6 coded bull who could still dominate the show ring. This balance of sharp and round traits is what attracts us to this young Allen son.

The oldest Hydro daughters are just calving in! This year we should be able to gain a better idea of his breeding pattern.

- Calving Ease: **4.4%** (69%R.)

Felon

Pedigree Analysis

Breeding a 96-point cow is an impressive feat. Breeding one that produces over 200,000 lb of milk, has incredible components, wins at the shows, and lives to the ripe old age of 16 years... now that is a cow!

We were privileged to see this grand old Linjet daughter (pictured on the left) a couple of times when we visited Ridgedale Farm. She checks every box that we look for in bull mothers.

When we had a chance at her Gold Chip son, the decision wasn't hard. With Felon, you combine Goldwyn blood with Linjet, a mating that makes sense. He's black, stylish, A2/A2, with a rare aAa code of 2-1-6.

The oldest Felon daughters are just starting to calve...and they look promising! There is still a limited amount of semen available, but likely won't last for long.

- Calving Ease: **2.5%** (74%R.)

Lu-Tenant-Red

Sexed

Pedigree Analysis

Lu ranks as one of our favorite cows of all time. Not only did she achieve the highest classification score possible in the breed, and win many accolades in national and international shows, she was just an awesome, balanced, functional cow! When you got up close to her, Lu was such an impressive individual, with moderate stature, tremendous width from head to tail, perfect feet & legs, and of course, that amazing udder.

As we often observe in many great brood cows, Lu didn't start out with a bang; in fact she didn't show up on the national radar until she was an aged cow. She was a cow with all the right parts, who bred back with ease, matured gracefully, and produced over 200,000 lbs of high component milk. As a cow who wasn't flushed much until later in life, Lu's impact on the breed is only just beginning.

Lu-Tenant-Red, Lu's natural son by Army, combines her breeding power with the legendary Apple blood. Much like his mamma, Lu-Tenant exhibits a moderate-sized frame, lots of strength and width, and a great set of feet & legs. His oldest daughters have just calved in recently. We are excited to see what the year holds for this bull!

Macnut PP

Pedigree Analysis & Progeny Description

Macnut PP is proving to be a reliable sire! The 300+ daughters in his proof are 85% GP or better. He is currently the highest confirmation proven PP bull in Canada and one of the top feet & leg bulls there also.

Breeders are extremely happy with their Macnut daughters, who are youthful 2 and 3 yr olds that know how to milk! The oldest ones, in their 2nd lactation have easily hit 120 lbs/day coming from tight, well-attached udders. Doug Brown reports that the Browndale herd has used him heavily on all types of cows and he has not disappointed.

Macnut PP is a total package sire, offering homozygous polled, A2/A2, great confirmation and outcross blood.

Maneuver PP *RC

Sexed

Pedigree Analysis

Maneuver PP, the popular younger brother to Macnut is looking very promising indeed. Sired by the popular Mirand bull, Maneuver is currently the #1 (tied) *RC *PP bull for confirmation in Canada.

Mirand seems to have been a match made in heaven on Macnut's dam. His full sister, pictured below, is maxed scored VG-87 as a 2yr old and she sure fits the mold of her beautiful mother and grandmother!

The oldest Maneuver daughters are breeding age heifers. They are reported to be nice, angular heifers with good strength through the front end. With straight toplines and exceptional feet & legs, it won't be surprising to see Maneuver heifers competing in shows in the future.

Browndale Sires available exclusively through Triple-Hil Sires in the U.S.

The list of great bulls to graduate from Browndale's program over the last 30+ years is nothing short of incredible. Names such as Stardust, Black Ice, Redliner, Titan, just to name a few, prove the fact that when Doug Brown picks a bull for his elite young sire program, you better take notice.

In addition to the two bulls on these pages, there is still semen available on many of the older Browndale bulls. Call Triple-Hil Sires for more details.

Lithium

Sexed

Triple-Hil
PHOTOGRAPHY

Pedigree Analysis

Sired by our popular bull Jonah, Lithium resembles his father in both confirmation and markings.

Lithium's dam was an up-and-coming star at Mt-Glen farms. Sired by Awesome-Red, this great young cow received her maximum score of EX-92 as a 3yr old. Unfortunately she tragically died in her 3rd lactation. Behind her is the EX-94 2E Fever (dam of 525HO68 Lincoln) and then the EX-94 3E Dundee Lovely who was the dam of 525HO114 Lynch.

In one package, you get the best of Mt-Glen's "J" and "L" families, plus a good dose of Luck-E udders. In our opinion, this was a genius mating decision by the Jackson's! Not to mention, Lithium exhibits a beautiful blend of parts and carries a very unique aAa code of 4-6-5. Charge your breeding program today with Lithium!

Radix *RC *PO

Sexed

Pedigree Analysis

This Rex-PP-Red son hails from a “hidden gem” cow family in southwestern PA. Radix is a beautiful blend of the round traits of his sire and the incredible dairyness and angularity of his dam. Pronto Lynita is a cow who brings everything together in one package...gorgeous confirmation, great production, super high components, fertility and longevity.

This cow family is known for their transmitting ability and longevity. The 3rd dam of Radix, Elk-Lick Charles Ardel, lived to be 18 years old and had 15 EX and 19VG daughters! Her Durham daughter also lived to be 12 years old. This incredible will to live carried on to Radix’s dam as she lived to be 12 years old and produced nearly 250,000 lbs of milk!

With his impressive proven parentage on both sides of the pedigree and the wonderful qualities that he displays we think this bull will live up to his name- Radix: “the source or origin”.

Pedigree Analysis

From our experience and observation, Erbacres Damion is a bull that will do great things in any pedigree. In fact, one of the best bulls in the first 5 years of Triple-Hil Sires was Hotrod, a Damion son. Here now is another Damion son, this time from none other than the world-reknown "Broker Elegance" family.

Emoji's dam was an EX-92 2E Goldwyn daughter that did wonders for her owners at Gentle-Valli Holsteins in Wisconsin. Her dam is the incredible EX-96 4E Linjet Eileen who was All-American 5yr cow in 2004. Then of course the great Elegance who sealed her reputation as one of the best transmitting maternal lines in the world.

This pedigree is stacked with many of the greatest sires of all time. Damion x Goldwyn x Linjet x Broker x Starbuck x Triple-Threat.

You can use Emoji with confidence.

Challenger-Red

Sexed

Pedigree Analysis

Meet Challenger-Red, a Done Right son of the legendary "Apple" herself. This cow has cemented her place in the hearts and minds of breeders across the globe as one of the greatest show/brood cows in the history of the Holstein breed. If you study her pedigree, it is apparent that Apple wasn't a genetic fluke, but rather the culmination of decades of astute breeding.

Our vision with this mating was to produce offspring from Apple that would compliment her physique while maintaining everything we love about her. We believe Challenger can channel Apple's breeding power while adding to the longevity and good components that already excel in this maternal line.

Challenger-Red is a very correct young bull, with his mothers capacity and wonderful rib, and also with a slope from hips to pins. Expect Challenger to add substantial openness and width to a mating.

Luxury *RC**Pedigree Analysis**

Luxury is a red-carrier Diamondback son from the acclaimed Savage-leigh Licorice family! His dam is an EX-93 Acme with her best record over 37,000 lbs. His 3rd dam, Savage-Leigh Leona, an EX-96 Allen daughter was always a favorite of ours and we are excited to offer a bull from this maternal line. These cows consistently make big milk records combined with beautiful udders and show quality potential.

On the top side of the pedigree, Diamondback a grandson of Apple, is making great mature cows with wonderful udders and plenty of width and depth in the front end.

This silky black bull should sire tons of dairyness, openness and width. He's also a rare combination of A2/A2 Beta Casein and BB Kappa Casein. Luxury should be a great mating on cows that are tall, and lack spring and depth of rib.

Unfortunately, Luxury died of complications from pneumonia last year. Semen supply is limited!

Genesis *RC *PO

Pedigree Analysis

Genesis is a Whiteout son from the cow family who recently made headlines for producing the first consecutive 20 generations of EX. Glory-Red the dam of Genesis, sadly died after her 2nd calving. She was admired for her wonderfully balanced confirmation, beautiful mammary system and fat and protein percentages.

Genesis exhibits a long, clean, dairy neck combined with plenty of rib and a straight topline. As he develops, Genesis exhibits a beautiful blending of parts from head to tail. Of course, being polled and A2/A2 are additional bonuses. Unfortunately he does carry the CVM genetic recessive trait. All things considered, we think combining the great Wilonna breeding on top with this maternal line will stack the odds in your favor.

The two-full sisters of Genesis recently calved in, and they are good!

Risk P-Red

Pedigree Analysis

This exciting young Done Right son boasts quite a few talking points! He's polled, Red & White, A2/A2 and carries a hard to find aAa code.

As you can see from her photo, the dam of Risk P-Red is a young cow with a future! This Ammo P daughter scored EX just fresh as a three year old and she continues to develop. Behind her is a cow family, affectionately known around the world as "The Roxy's". Risk P-Red traces his maternal roots back to Roxy through a branch that Ridgedale developed into it's own legacy, producing legends such as the EX-96 4E Raichu and her sister the EX-95 Runway. Of course, Ridgedale Raimund, a proven bull who spent several years in our lineup hails from this family also.

The Peachy family has developed a superb herd of Holsteins, focusing on balance matings, high components and polled. Risk P-Red brings it all together! We think the mating of Done Right on this beautiful uddered Ammo daughter is brilliant.

Denali

Pedigree Analysis

This Dundee son hails from Bill Stoltzfus' respected breeding. When you think of Wilonna, most likely the names that come to mind are "Avis" and the reknown Skagvale Gay maternal line that made so many great ones. But there is another cow family which has transmitted exceptionally well at Wilonna, churning out many high-scoring, durable, long-lived cattle...the "Dream" family.

Denali's dam, an EX-91 2E Boss Iron daughter is a poster child of trouble-free longevity. She calved in nearly every year for nine lactations and produced over 214,000 lbs of milk. Behind her is an EX-92 Rubens x EX-93 2E Redmarker x EX-92 5E Inspiration x EX-92 3E Triple-Threat x EX-91 Elevation, a who's who of respected Holstein sires.

Denali, with his unique pedigree and rare aAa code, should be a great option for dairymen looking to add strength, width and rugged longevity into their genetics.

Sunrise P-Red

Sexed

Pedigree Analysis

One look at this bull's photo spells greatness. Sunrise P-Red combines Diamondback's proven performance with the prevailing Sophia maternal line at Burket-Falls. Flat-boned, dairy and deep-ribbed, Sunrise P-Red offers a unique set of qualities as a red & white polled Diamondback son.

Breeder's Perspective

Sunrise P-Red is a bull bred for the times. With all the discussion among breeders about health traits and longevity, Sunrise rises to the occasion. His dam produced over 255,000 lbs, his dam's full sister made 230,000 lbs, and his grand-dam 185,000... all while being functionally sound. High lifetime production and good health go hand in hand. Add Diamondback on the top side, and it gets really exciting! Sunrise exemplifies over 60 years of Burket-Falls breeding.

Great Guy *RC *PO

Pedigree Analysis

The Ginger family has done amazing things for the Petersheim family in Viroqua, WI. When it comes to transmitting power, Granola is the best of the best at Welsh-Edge Holsteins. She currently has 11 classified daughters; 7 are EX and 4 are Very Good, with the lowest scored daughter at VG-87!

Granola, who lived to be 12 years old and produced nearly 230,000 lbs of lifetime milk is one of those rare cows who doesn't miss when it comes to passing her greatness on through her progeny.

When we had the opportunity to take on this polled A2/A2 Rex-PP-Red son from Granola's EX Windbrook daughter, we knew Great Guy fit the Triple-Hil mold. Combining Rex's consistent transmitting pattern with this proven maternal line should produce uniform results in your herd. We look for bulls that we believe will pass on balance, consistency, and longevity. Great Guy checks the boxes!

Panic P *RC *PP

Pedigree Analysis--Breeder's Perspective

There are two words that immediately come to mind that describe the cow family that produced Panic. The first word is "substance". The cows in the family exhibit the kind of substance and ruggedness that we desire at Elquest. While they are cows with substance, they also maintain femininity and dairyness. They are not rugged and coarse, they are rugged and feminine. If you go back into the pedigree for six generations, you will find an EX-94 Linjet daughter. The Linjet influence still can be seen all these generations later.

The second word is "fertility". We rarely breed cows back less than 90 days in milk. We don't use any of the normal reproductive protocols utilizing hormones. Panic's dam has calved at 1-8, 2-9, 3-9, and 5-0. The only reason she went several extra months between her third and fourth lactation was that we decided she needed a bit of a break. Panics 2nd dam calved at 1-9, 2-9, 3-10, 5-1, and 6-3. His third dam is currently carrying her 8th calf and is not 10 yet.

We don't expect Panic to sire your next show winner. We do however, expect that he will sire a moderate sized cow with the substance and fertility to perform well in a variety of different environments.

Pedigree Analysis

We are very happy to release Feature, a bull who's been a long time in the making! About three years ago, we visited Garden-State Holsteins in New Jersey, and found a beautiful Addiction daughter from the Penn-Gate Skychief Finesse family that caught our eye. She brought many great qualities together in one package, including a solid transmitting maternal line, extreme protein yields and polled! She is still in the herd today, in fact her picture, across the page was just taken in 2022. With 5 calves already under her belt, Fusion-Red is proving to be a cow that causes little trouble and churns out profits with her high-testing milk.

The mutual mating of Atlanta P was agreed upon and now this fancy black bull is the result! Feature is a bull who should cross well on the daughters of many of our 5-6-1 aAa combination bulls, including Black Onyx, Lynch, Pep-Red, and Done Right-Red.

Sire: Luck-E Ladd Atlanta 529 (EX-92)

Pedigree Analysis

Meet Sully, another great young Macnut PP son from Elquest Holsteins! We view t this sharp-weighted bull as a logical replacement for Atlanta P who now has limited semen inventory.

Another bull from the great “Finesse” maternal line, Sully also brings together the genetics from many other impressive brood cows, including Elk-Lick Charles Ardel, Kamps-Hollow Altitude and Snow-N-Denises Delilah. Sully’s dam is a beautiful young cow who has her best days ahead of her!

On the top side of this pedigree, Macnut PP is proving to be a bull who brings consistent results to dairymen in Canada and here in the U.S. They are moderate-size, wonderful udders and so far 85% of his daughters in Canada have scored GP or better.

Besides bringing so many of these foundational cow families together, Sully can add value to your genetics with his homozygous polled and A2/A2 traits.

Sire: Hulsdale B Macnut PP

Pedigree Analysis

Meet Clear Cut-Red, the latest genetic masterpiece from Burket-Falls. On the top side, All Things-Red is a closely bred Burket-Falls bull who is siring lots of width, openness and a will to milk.

Clear Cut-Red hails from the same line that produced our popular proven sire, Done Right-Red. In fact his grand-dam is the mother of Done Right. Clear Cut's dam, a Windsor-Manor Zdestiny daughter was an impressive cow, following in her dam's footsteps, scoring EX-91 and making big records, but was unfortunately lost before she saw her full potential realized and was never pictured. As you can see from the photo at the top of the adjoining page, old 1562-Red is quite a transmitter, as her Absolute-Red daughter is EX-93!

This exciting young red & white bull is polled, A2/A2 and carries an all round aAa code of 4-5-6! Clear Cut-Red should be a great mating for your tall, dairy cows that need a does of strength, width and substance of bone.

Pedigree Analysis

Rendezvous (*pronounced: rondi-voo*) Noun: A meeting at an appointed time and place.

Comestar Outside is a household name in the industry. This Canadian bull saw immense success in his day and joined the elite list of sires who produced and sold over a million units of semen at Semex. Outside daughters generally weren't stand-out young cows, but proved to be famous for longevity and overall profitability.

Rendezvous' dam is an wonderful specimen in her own right who looks like 92 points won't stop her. She' sired by another Canadian legend, Hanoverhill Raider (Starbuck x Mil-R-Mor Roxette EX), who Pete Heffering considered one of the best bulls he ever bred. We haven't even talked about this incredible maternal line, with his 2nd dam being the EX-95 Liberty Rae, then Lana Rae. These cows have an amazing track-record for transmitting high type cattle across the globe.

Rendezvous should sire plenty of width and substance.

Battle

Pedigree Analysis

Here we introduce the final son to be offered from the EX-95 4E matriarch, Wilonna Linjet Avis. This incredible cow lived to be 16 years old and produced nearly 300,000 lbs of milk. Avis is leaving her legacy through multiple sons. Her son, Whiteout is proving to be a consistent transmitter of width and capacity, along with a will to milk.

Battle is sired by Boss Iron, an Italian bull who made a name for himself as a transmitter of high butterfat, fertility and good health traits. Boss Iron has sired some tremendous high-scoring show cows, including the Decrauszs Iron O'kalibra (EX-97) in Switzerland and Stone-Front Iron Pasta (EX-96) here in the U.S.

Battle is a beautiful, well-blended bull with gorgeous dairy quality and deep, open rib.

Pedigree Analysis--Breeder's Perspective

Horizon P-Red hails from the Helen family at Ja-Bob Holsteins. The matriarch, Sky-Hi Mars Helen EX-92 GMD, started this prolific family that has yielded over 350 EX female maternal descendants in ten different countries worldwide along with over 1,000 VG female maternal descendants. Horizon hails from the same line that produced Ja-Bob Jordan-Red, with his 5th dam being Jordan's full sister.

If there is a characteristic of Horizon that is easily noticed in his closest dams, it is that they are wide and strong, with high components. His Grand-Dam, Ja-Bob Pembroke Holli-P-Red has three EX sisters and seven VG sisters. His dam was a fantastic young cow that we lost too early in her life due to a strange injury.

We are pleased that the genetics of this branch of the Helen family will continue through Horizon and have a positive effect on both Holstein and Lineback breeder herds alike.

K.I. SAMEN is the largest, privately owned A.I. station in the Netherlands. Through close cooperation between the A.I. station and the dairy farm next door, we can see the results of our breeding program immediately. K.I. SAMEN sells its bull semen to farms worldwide. In relation to genetics, our philosophy is based on proven practical breeding.

PRACTICAL PROVEN BREEDING

“At K.I. Samen we want dairy farmers to be able to breed well-built cows, that produce easily, that last for a long time, and who require little extra work. Two-year-olds don't need to produce the maximum, per se. On the other hand, it is important that cows have what it takes to develop and progress during the lactations. That they can develop into a tremendous cow without hassle.” --Guus Verhaag, K.I. Samen

Stellar

Pedigree Analysis

STELLAR: Extremely high in quality; excellent...the name describes the bull, a combination of breeding from two of the oldest Jersey establishments in the world. With 70 years in the business of breeding purebred Jerseys on a grass-based commercially-operated dairy farm in the Taranaki region of New Zealand, the Revell family of Beledene Jerseys is known around the Jersey world for their cattle of highest quality.

Michael Heath of Heath Jerseys, Mark & Will Iager of Entourage LLR, and the Stiles family of Spring Valley Farm of Westminster, MD have dedicated their Jersey breeding career to bringing together and providing the very best of pure Jerseys in the world for all of us to use for the improvement of our herds.

Stellar is the result of combining the production of his sire, Applejack, with the breeding power of the cow family in Beledene Mons Selina. On the top side, there are brood cows such as Duncan Belle, C Tops Impressive and Molly Brook Fascinating Flower. He also has six lines to Highland Magic Duncan. All these animals are known for their production. On the maternal side, Beledene Mons Selina has five lines to Beledene Dukes Lord who is a full brother to Beledene Dukes Landy, the bull used in the USA that worked so well in the grass-based dairy farming movement. Health traits, mainly being low SCC, longevity, strong feet and legs as well as high components and good udders, are bred into the cattle at Beledene Jerseys.

Study the breeding of the bull STELLAR and see that Triple Hil Sires is making available a truly rare young sire.

Saber-P

Pedigree Analysis--Breeder's Perspective

In 2017 we were looking to add a few foundational polled Jerseys to the Elquest herd. A dealer contacted us about a pair of polled full sisters that were bred heifers. Their dam was an EX 91 cow that spent extended time on a flush program for the export market. She had an EX 92 sister as well. The pedigree fit our philosophy of building not only from deep pedigrees but more importantly from wide cow families.

We had no idea that the genetics we purchased in those two heifers would be so impactful. Today Shadow (Saber's dam) is EX-92 and her full sister is EX-93. More impressive is their transmitting ability. Saber's only sister is already VG-88 at three years. The 93 point sister to Shadow has an EX daughter at three years as well as an 87 point two year old daughter. The consistently beautiful udders is a family trademark.

Then there are things that never show up on paper. The attitude - not a mean, hard to work with attitude but a toughness and a determined "will to live" attitude. When the cows go out to pasture, Shadow puts her tail up and gallops out of the barn. With that attitude comes an agility that allows her to make the turn at the end of the barn without falling. In five years of galloping I have never seen her fall.

Ayrshire Ambassadors Cooperative

We have partnered with *Ayrshire Ambassadors Cooperative*. Established in 2016, AAC's mission is to make owning Ayrshires an accessible, desirable, and profitable experience.

This group of Ayrshire breeders and enthusiasts believe that there is a need and desire for Ayrshire bulls that closely match the Triple-Hil philosophy. AAC serves as the sire acquisition and promotional team while Triple-Hil Sires houses, collects, and markets the bulls that join the Ayrshire lineup. See *Ayrshire lineup* on following pages.

Albert Belle

Pedigree Analysis & Progeny Description

Meet Albert Belle, an impressive bull, with an impressive pedigree. This gentle giant is backed by more than five generations of Miller's genetics.

Albert Belle's sire, Thome is a Burdette son of an EX Laredo daughter who made over 131,000 lbs. with great components. Mick Miller says she was of the most aggressive eaters he's ever bred. He has used three of her sons and two of her grandsons in his own herd.

Muffin, the tremendous EX-93 cow pictured below, is Albert's dam. She produced over 154,000 lbs with nearly 5% fat and 3.3% protein. She's sired by Miller's own Tri-Star son, Burt who they consider one of the best bulls they ever used. Muffin, a herd-favorite, has a splendid disposition which definitely has been passed on to her son.

Albert Belle's oldest daughters have calved in! As a group, they display width from head to tail, exceptional rib, solid feet & legs, and great udders!

Silver Star *PO

Pedigree Analysis--Breeder's Perspective

I bought Silver Fox and her Dam, Foxy Broxy at the dispersal of Master Breeder Doug Shores herd. Both were on the breed's Elite list. Foxy Broxy (EX-90), was a tremendous cow that lived for 17 years, breeding back each year in my 100% grass-fed herd.

Silver Fox was a favorite in Doug's herd, she was a high-index cow with tremendous width and openness of rib. Her daughter, Burdette's Slvr Fox (EX-93 3E) is a strong, well put together cow with records more than 1,000 lbs over herdmates. She's dairy, correct in the feet and legs, open and youthful. She's over 10 years old, 100% grass-fed with more than 4% fat.

This cow family is fun to work with. Welded on udders, wide throughout, combined with exceptional dairy character. They breed back and calve in easy. Silver Star's calves have lots of vigor and are quickly up and looking to nurse. His calves are born small and grow quickly.

MASTERPIECE GENETICS

NEW DEVELOPMENTS!

We are thrilled to announce the partnership between Triple-Hil Sires and Masterpiece Genetics! For the past few years Masterpiece Genetics has been injecting new life into the Guernsey breed with a lineup of high-quality bulls. The Masterpiece emphasis on providing genetics from proven cow families and common-sense matings is closely aligned with our breeding values at Triple-Hil Sires.

In addition to the Guernsey bulls, Masterpiece will be entering the market in other dairy breeds as well, including Holstein and Jersey. These sires will be selected from deep maternal cow families, with an emphasis on high-type and show-ring appeal. You can expect the first Holstein and Jersey bulls to join the Masterpiece lineup in the spring and summer of 2023.

Going forward, all semen sales for Masterpiece Genetics will be made through Triple-Hil Sires and THS distributors. Masterpiece will maintain its own unique branding and will be showcased in a separate sire directory. A new catalog will be printed in early 2023. Let us know if you would like one mailed to you!

How Should I Use Your Bulls?

In an industry focused on averages and population comparisons, it is helpful to remember that your herd's genetics will progress (or regress) one mating at a time. Although we strive to select balanced bulls, no one bull is right for every cow. We highly recommend using our bulls by their aAa code for best results.

Animal Analysis Associates (aAa) is an independent organization whose analyzers are trained to identify the qualities a cow needs in a mating and to identify qualities a bull can bring to the mating.

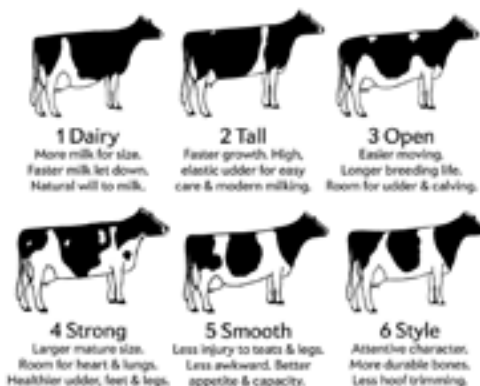

At Triple-Hil Sires, we promote aAa because it has worked for us and because we see it working in herds all over the world. Working with bulls in real life has made the advantages of this mating tool stand out very clear to us. For example, if 525HO149 Clearcut-Red (aAa: **456321**) and 525HO147 Sully P (aAa: **231456**) are standing in pens beside each other, even a person with little cattle knowledge and experience would recognize that these two bulls are very different and should be bred to very different cows. Clearcut and Sully are both beautiful Holstein specimens, but the one will add strength, width, and style while the other excels in tall, open, and dairy qualities.

Sire the Need. It works.

aAa Code Explanation

For a BULL, aAa numbers are written from left to right in the order he possesses them.

For a COW or HEIFER, aAa numbers are written from left to right in the order she needs them.
